

CO₂ MiniBlast SDI-5

The Versatile Solution in Dry Ice Blasting

The CO₂ MiniBlast SDI-5 provides fast, solvent-free cleaning without secondary waste. The dry ice particles sublime upon contact with the targeted surface which allows you to clean equipment in place. The process requires no cool down, no masking, and little or no disassembly.

For Use With Any Type of Dry Ice

U.S. Pat. No. 5,520,572

- Innovative design uses dry ice block, pellets, or nuggets to create a versatile blast cleaning medium
- Ability to use any form of dry ice allows you to take advantage of local availability and pricing to maximize buying efficiency
- Intuitive ergonomic controls make it simple to operate
- All pneumatic design makes maintenance easy
- Small and light enough to go almost anywhere
- Rugged stainless steel construction for years of hard use

Which is easiest to get and least expensive in your area - block, pellets or nuggets? The SDI-5 is capable of using each as a blasting medium.

Baked-on deposits are removed quickly without harmful abrasives or added media contaminants.

The SDI-5 is used to remove residue and contaminants from sensitive surfaces...even in the semiconductor industry.
